STUDY NERVE CHART CAREFULLY

Look carefully at the nerve chart below, see where the nerves go, see what the nerves do. Perhaps you are suffering needlessly. Perhaps a pinched nerve is causing your health problem. Perhaps by freeing the blocked nerve, your chiropractor can release nature's wonderful healing power.

1. A slight "pinching" of nerves at this point can cause headaches, some eye diseases, ear problems, insomnia, abnormal blood pressure, colds, hay fever, sinus trouble, nervousness, wry or stiff neck, some types of arthritis, colic in babies, glandular trouble, etc.

2. A nerve difficulty in this part of the spine can be the cause of so-called throat trouble, neuralgia, pain in the shoulder and arms, goiter, nervous prostration, etc.

3. In this part of the spine, a "pinched" nerve can cause so-called bronchitis, pain between the shoulder blades, rheumatism and neuritis of the arms, shoulder, or hands, bursitis, etc.

4. A blocked nerve at this point can cause so-called nervous heart or fast heart, asthma, difficult breathing, bronchial congestion, etc.

5. Stomach and liver trouble, pleurisy and a score of other troubles can be caused by pressure in this part of the spine.

6. Nerve pressure at this point can cause gall bladder problems, dyspepsia or gas of upper bowels, shingles, hiccups, etc.

7. Certain kidney problems or diseases, eruptions and other skin diseases can be caused by nerves being pinched in the spinal openings at this point.

8. Chiropractic adjustments here often helps such troubles as so-called lumbago, constipation, colitis, etc.

9. Nerve pressure at this point can cause bladder frequency, prostate problems, lower bowel and abdominal pains.

10. A slight slippage of one or both of the hip bones or the sacrum may cause so-called sciatica, leg or knee pains, and many other leg problems.

What a way to go through life

**TOUCHY SKIN
THAT BREAKS OUT**

**ALLERGIC
NERVOUS ITCH**

**ALLERGIES
AFTER EATING**

If you're an allergy sufferer, it probably won't console you much to know you have lots of company—starting with the first recorded history. The Bible mentions hives, and public records show allergies and allergic reactions causing death. Julius Caesar suffered with allergies.

Why can six people sleep on the same pillow, play with the same dog, eat the same food and breathe the same air that a seventh can't? Why do some have allergies and other don't?

It can't be the object itself that causes the reaction. The answer is in the body of the sufferer. He has low resistance to irritants and isn't able to throw them off as a normal body does.

The powerful allies of the body that defend it against foreign substances, in a normal person, are in good working order. The defense mechanisms—white blood cells, the lymph system, and waste-eliminating systems—are all kept in order by the nervous system.

The nervous system starts in the brain and the nerve trunks are threaded through the vertebrae in the spine. The surrounding bones protect them unless there is even a slight dislocation of the vertebrae. The misaligned bones pinch the nerves, cutting down on the messages and nerve energy sent. When this happens the part of the body controlled by the distorted nerve impulses cannot function properly. Like a drunken driver, the nerves can get into all kinds of trouble.

The real cause of allergies, then is not the allergen itself, but due to distorted nerve impulses caused by spinal vertebra being out of its proper place. Interference of the nerve impulses causes the body to weaken.

The only real way to solve the allergy problem is to get rid of the weakness. Strengthen the body's natural defenses by restoring its ability to send nerve impulses.

AND THAT'S A JOB FOR A CHIROPRACTIC!

Insurance pays for Chiropractic Care. This includes workman's compensation for on the job injuries, automated pay for whiplash related injuries, union health and accident plans. Individual health and accident policies and Medicare. Look for our listings in the yellow pages.

**SLIPPED
 INTERVERTEBRAL
 DISC**

The general public is hearing more and more about the slipped or herniated disc. The results obtained on this type of case under Chiropractic are very encouraging. Slipped disc cases revealed that: 54.6 per cent of the cases became well, 39.1 per cent were much improved, 3 per cent showed no change and .4 per cent became worse. Consideration of the first three groups shows that 96.7 per cent of all cases became well or showed some improvement under Chiropractic care.

There is much evidence that diagnosis of "herniated disc" is a catch-all for many low back disabilities. Most so-called "herniated disc syndroms" are nothing more than vertebral subluxations. Statistics show rapid recovery under Chiropractic care in the majority of cases, and such recovery would not be possible if extensive pathology or severe trauma had been present. Such a diagnosis can be confirmed only by surgery and diagnosed cases are later confirmed upon surgical intervention. It would seem all the more important that a person suspected of having herniated disc condition consult a Chiropractor first.

**MISALIGNMENTS OF
 SPINAL VERTEBRAE
 OCCUR FREQUENTLY**

The stress and strain of everyday living takes its toll. Awkward movements in our work, quick 'twists' of the neck or back; loss of sleep or poor sleeping posture; slumping posture while sitting; abnormal fatigue; and emotional upsets, are only a few of the many causes of strain on our spine and nervous system.

Physical and emotional stress and strain may result in frequent occurrence of misalignments of spinal vertebrae. Sometimes a displaced vertebrae causes an immediate pain, but more often the effects may develop slowly in the form of stiffness or ache in the neck or back; headaches; increased nervousness; indigestion; upper respiratory infections; or other physical disorders.

Through many years of study, the chiropractic profession has found that the best way to eliminate the eventual disease-causing effects of misaligned vertebrae is through regular chiropractic check-ups. By checking your health and neuro-spinal systems on a periodic basis, your doctor of chiropractic is giving you the best health assurance available today.

January, 1972

Dear Friends and Patients:

The most valuable asset a person or family can have is good health. Chiropractic therapy is the treatment chosen by millions of people throughout the world for restoring health and maintaining vitality. More and more open minded and intelligent people everywhere are realizing that good health is gained and maintained only when normal nerve energy flows from the brain, down the spinal cord, and out between important spinal vertebrae to vital body organs and tissues.

Many patients have come to our office and have been restored to health and then have not followed through in order to maintain the alignment and balance of the spine which we were able to achieve. To these people I sincerely and cordially urge a program of maintenance chiropractic care NOW. If we once correct the spine, it is relatively easy to maintain the correction. However, if you, through the same bad habits, allow the original weakness and distortion to re-accumulate, we will have to start correction all over again.

So, please, if you have never embarked on a program of maintenance, or if you have, but then got careless, NOW is the time to start again. Your most important asset is your health and feeling of well-being. Without this, life is hardly worth living.

LOW BACK AND LEG PAIN

An estimated half million people will be disabled this year by spinal defects which cause low back and leg pain. However, chiropractic research indicates that most low back and leg pains are caused by vertebral misalignments in the lower spine.

A fall, accident, back strain or chronic posture decay may cause a spinal segment to become misplaced. Nerves passing through openings between adjacent segments become pinched and pain occurs.

Remember, individuals with low back and leg pain respond extremely well to chiropractic care. Make sure that you visit your chiropractor regularly.
